

FURROW CRUISER

- Unique combination of sidewall crumbling and soil firming.
- Angular tooth design helps prevent clogging.
- Works in virtually all soil - including heavy and clay-based.
- Especially effective in saturated soil.
- Provides improved seed slot closure in both conventional and no-till situations.

Patent Pending #61220700

Fits into your existing closing wheel hubs.

ABOUT COPPERHEAD AG

Copperhead Agricultural Products, LLC was founded by Dave Terveen and Kevin Berg after the two discovered they had a unique combination of ideas and know-how. Dave is a full-time farmer and business owner in South Dakota; Kevin grew up on a farm and is a Mechanical Engineer and machine shop owner. Coffee-shop discussions of new ways to approach common challenges led to the creation of the FURROW CRUISER. With more innovative products in the works, Copperhead Ag was formed.

Our mission: to develop affordable solutions to challenges facing the modern farmer.

SEED... FURROW CRUISER BUSHELS

ONE GREAT IDEA

FOR ONE HARD WORKING FARMER

FURROW CRUISER

SPIKED CLOSING WHEEL

- Improves seed-to-soil contact leading to improved and more even emergence.
- Allows young roots to penetrate sidewalls.
- Prevents furrow from re-opening.
- Built-in depth control allows for use with multiple crops, on both sides of the furrow.
- UHMW Poly material provides excellent abrasion resistance, giving you longer life.

FURROW CRUISERS ELIMINATE SIDEWALL COMPACTION!

Sidewall compaction prevents roots from penetrating the soil, resulting in uneven emergence, poor stands, and decreased root growth. *FURROW CRUISERS* crumble this sidewall – **Problem Solved!**

CRUMBLING AND FIRING ACTION PROMOTES SEED-TO-SOIL CONTACT AND PREVENTS FURROW RE-OPENING!

Standard closing wheels press the soil closed, especially when it is wet. As the sun hits the soil and it dries, we've all seen furrows re-open, providing little seed-to-soil contact and exposing the seeds to the elements. *FURROW CRUISERS* crumble the dirt into the furrow, simultaneously applying light pressure with built in depth control – **Problem Solved!**

LESS AGGRESSIVE DESIGN ALLOWS FOR USE ON BOTH SIDES OF THE FURROW!

Because of the built-in depth control and unique tooth design, the *FURROW CRUISER* doesn't flip seeds out or over-work the soil. Other more aggressive spiked closing wheels are used only on one side of the furrow to solve these problems, leaving you susceptible to sidewall compaction on the other side of the furrow. *FURROW CRUISERS* can be used on both sides of the furrow – **Problem Solved!**

FURROW CRUISERS FIT INTO YOUR CLOSING WHEEL HUBS!

FURROW CRUISERS are designed to fit into the closing wheel hubs on John Deere, Kinze, and late model White planters. They also fit the Case/IH SDX-30 and SDX-40 no-till drills. *This saves you money – no buying an entire new assembly – Problem Solved!*
